Evening Brief

Date: Monday July 16, 2018

Weather Summary

...Warmer and Drier Many Areas With The Risk of Holdovers From Recent Lightning...

Significant lightning occurred in the past 24 hours across Northern NV/Southern ID and NW UT on Monday. Moisture was mostly light, and heavy initial attack occurred and will likely continue into midweek. Further south, wetter thunderstorms occurred, bringing the threat of localized flooding and landslides in recent burn scars.

Hot and dry weather returns to most areas Tuesday onwards, with the exception of the far south, before lightning returns to Nevada by mid-week, then spreads east and north through the end of the week. Thunderstorms later this week look to remain on the drier side over the northern half of the Great Basin.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

| | | |
|-------------|---|--|
| Great Basin | 3 | Moderate-Heavy Initial Attack Activity |
| National | 3 | New Fires and Acres: 38 fires for 20092.2 acres; 2.5 acres large fire growth |

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

Fuels and Fire Behavior advisories have been issued for [Nevada](#) and [Utah](#)

Fire Potential

Sagebrush live fuel moisture values are still below normal across Utah, and near record lows for a small area of far western Idaho. Elsewhere across the geographic area the sagebrush live fuel moisture values are closer to normal or even above normal for mid-July, but have peaked and are on the downward trend rapidly due to recent hot/dry weather.

Fire danger values continue to drop over southern Nevada, the AZ Strip and southern Utah, with most areas below the 50th percentile. Over the rest of Utah, ERCs have lowered as well, to between the 50th - 80th percentile. Continued higher humidity and scattered wetting rains into next week over the southern and eastern portions of UT/NV and the AZ Strip will minimize any ignitions from growing rapidly.

ERCs are on the rise over western and northern Nevada into Idaho as dry weather continues, with current ERCs in the 50th - 80th percentile, and approaching the 90th percentile in some pockets. The significant carryover fuels from 2017 and additional critically dry fine fuel crops from the spring rains in western/northern NV into parts of southern ID/western UT are still significantly contributing to fire spread. Sagebrush fuel moisture continues to decrease in these areas with fuel moisture across portions of western/northern Nevada now below critical levels and contributing to fire spread.

Resources:

Aviation within the Great Basin

- 22 SEATs
- 8 Type 1 Helicopters / 4 Committed
- 8 Type 2 Helicopters / 7 Committed
- 22 Type 3 Helicopters
- 3 LATs / 1 VLATs

Crews Committed within the Great Basin

- 15 IHCs Committed / 1 Available
- 28 T-2 IAs Committed / 15 Available
